

*Birds, Building Science Concepts Series, Book 3.*

I have found a page on this website called science kids. It shows different lesson plans for the topic of flight. I would use this to show the children different aspects of flight and how we can look at flight in a larger scale. Not just to do with birds.

A online activity you could do with the class is to get them to participate in a quiz located at My Birdz (My Birdz, 2012) an educational way for them to play a game related to birds and do it in a fun and exciting way. Seeing images/pictures will allow them to see what the birds will look like rather than having to picture it in their mind. If you are wanting children to share some information they already know about birds you could start them off with playing a fun activity such as Birds un-scramble (Learning Games for Kids. Com, 2013) to begin them off and get their brains going. This will get them talking to create a discussion with might even trigger other children listening to remember something they know to share it making a large conversation occur.
