### Building interest in Christchurch Primary Science Workshops

Over recent years there has been declining interest in workshops. It is an immense workload for co-ordinators and presenters to plan and organize these workshops. Unfortunately, in the last few years, many have had to be cancelled at a very late stage due to the lack of registrations. In 2015 more than half the workshops were cancelled, including the main 'event' - Sky Lab. Week. In order to increase teacher interest and participation in Christchurch Primary Science workshops, we would appreciate your feedback in the following survey:
